Professional Summary

AI/ML Engineer and M.S. Computer Engineering candidate with 2+ years of engineering experience across applied machine learning, software quality, network engineering, and web development. Experienced in building Python-based machine learning solutions for time-series prediction, medical image classification, and edge/IoT monitoring. Strong foundation in software engineering, networking, SDLC, Agile methodologies, and scalable system design.

Technical Skills

Programming: Python, SQL, Java, .NET Fundamentals

Machine Learning: Supervised Learning, KNN, Classification, Time-Series Prediction, Computer Vision, Feature Engineering

AI/Data Systems: REST APIs, Relational Databases, Schema Design, Edge Computing, Raspberry Pi, ESP32, Analytics Dashboards

Software Engineering: Git, Agile/Scrum, SDLC, Requirements Analysis, Testing, Defect Tracking

Networking: Network Monitoring, Security, Reliability, Infrastructure Support

Cloud: AWS Fundamentals

Experience

Software Quality Assurance Engineer – Texas Mobile

Feb 2025 – Aug 2025

- Executed functional, system, and regression testing across medical-device software and firmware.
- Analyzed defects, release risks, and quality trends to improve software reliability.
- Mapped test cases to requirements and design controls while maintaining validation evidence.
- Collaborated with software, firmware, and quality engineering teams in regulated SDLC/QMS environments.

Network Engineer – Solve Tech LLC

Jan 2023 – Jan 2024

- Designed and maintained secure, scalable, and highly available network infrastructure supporting business-critical systems.
- Monitored network performance and resolved connectivity, configuration, and infrastructure issues.
- Collaborated on network planning, system integration, and deployment projects.
- Supported disaster recovery, backup strategies, business continuity, and network security improvements.
- Evaluated emerging networking technologies to improve performance, scalability, and reliability.

Web Developer – Rejolt EdTech Pvt. Ltd.

Aug 2022 – Dec 2022

- Developed responsive POS and mobile interfaces along with website UI enhancements.
- Integrated REST APIs and collaborated with cross-functional Agile teams.
- Participated in sprint testing, debugging, and technical documentation.

Projects

ThermoGuardian AI – Edge AI Healthcare Monitoring

- Designed a continuous health-monitoring prototype using ESP32 sensor nodes and Raspberry Pi.
- Built real-time data aggregation pipelines and dashboard visualization for fever trend detection.
- Applied machine learning-based trend analysis and developed low-latency alert mechanisms.
- Designed scalable edge architecture emphasizing reliability and performance.

Bone Deformity Identification – Computer Vision

- Developed a medical image classification workflow with dataset preprocessing and feature engineering.
- Performed baseline model comparisons and evaluated classification performance.
- Documented assumptions, risks, ethical considerations, and model limitations for reproducible research.

Stock Price Prediction – Time-Series Machine Learning

- Built a KNN-based stock forecasting pipeline in Python.
- Performed data cleaning, feature scaling, and model evaluation.
- Conducted reproducible experiments to analyze prediction accuracy and limitations.

Education

California State University, Northridge

Jan 2024 – May 2026

M.S. Computer Engineering

GPA: 3.58/4.00

Relevant Coursework: Computer Systems Architecture, SoC Design, Biomedical Engineering Models, Verilog/SystemVerilog, ASIC Development
